ApplicationXtender xPlore Full Text Search

Precise search results delivered quickly and efficiently increase productivity by helping knowledge workers make better decisions faster. OpenText ApplicationXtender Full Text Search helps users discover information easily and put it to work immediately.

OpenText™ ApplicationXtender Full Text Search provides the ability to navigate files and content quickly to expedite the information discovery process and reduce the risks associated with managing vast volumes of unstructured information. With ApplicationXtender Full Text Search, knowledge workers can even combine keyword and full-text searches to return the most precise search results with just a single query.

OpenText ApplicationXtender Full Text Search delivers:

- **Precise search results** — Combine keyword and full-text searches to quickly return precise search results.
- **Advanced search functions** — Perform advanced search functions such as typo, thesaurus, stemming, proximity, and wildcard searches without complex search syntax.
- **Support for hundreds of file formats** — Search more than 200 file formats out of the box.
- **Role-based information access** — Ensure appropriate access to information through role-based user access.

Cost to Purchase ApplicationXtender Full Text Search

ApplicationXtender Full Text Search

- Pricing below is the minimum cost to enable the full text search feature
- Minimum purchase to implement ApplicationXtender Full Text Search requires purchase of
 - 1 – Concurrent Connection License Pack
 - 1 – Server License
- *If it is desirable to have the Full Text Search feature available to all ApplicationXtender users, it is recommended that the number of Full Text Concurrent Connection licenses match the number of ApplicationXtender Server Core Concurrent Connection licenses*
